Career Objective

3rd-year Computer Science Engineering student with a strong foundation in Java, Python, and backend development. Seeking a challenging role where I can apply my programming skills, build scalable systems, and contribute to innovative projects that create real-world impact — while continuously growing across emerging technologies.

Education

Bansal Institute of Science and Technology — B.Tech (CSE), 2024 – 2028 • CGPA: 7.12 | 3rd Year

New Era Public School, Gadarwara — Class XII, 2024 • Percentage: 75.4%

New Era Public School, Gadarwara — Class X, 2022 • Percentage: 80%

Technical Skills

Languages: Java, Python, C++. OS: Windows. Tools: Git, VS Code.

Projects

TerraSense-X | Semantic Satellite Retrieval & Multi-Temporal Change Analysis — 2026

Python, FastAPI, React, RemoteCLIP, FAISS, NumPy, OpenCV, Sentinel-2

- Satellite imagery prototype for natural-language search, historical image comparison, and review of possible land-cover changes inselected areas.
- Uses RemoteCLIP image/text embeddings with FAISS retrieval; the workflow processes Sentinel-2 imagery into GeoTIFF/COGtiles and combines image alignment, pixel-difference masks, and NDVI/NDWI/NDBI indicators.
- The team presentation reports 10,584 indexed Earth-observation vectors and 28 detected change regions (22 high, 5 medium, 1 lowconfidence); these are prototype outputs, not formal accuracy results.

Sahayak AI Predict | WhatsApp-Native Civic Grievance Classification & Prediction System 2026

- Built WhatsApp-native grievance system for India's 535M WhatsApp users — no app download required — using Evolution API,Python Flask, and Supabase PostgreSQL.
- Integrated Google Gemini 2.5 Pro for AI-powered complaint classification, department routing, and GPS extraction fromcitizen-submitted text and photos.
- Engineered proactive prediction engine combining ward complaint history, live weather data, and drain reports — auto-dispatcheswork orders when risk score exceeds 70.
- Implemented complainant-verified ticket closure with auto-escalation to senior officers, eliminating paper-close fraud endemic to CPGRAMS.

Urban Blooms | Smart Rooftop Farming App — Backend Developer | State-Level Hackathon Winner 2025

- Developed backend for a smart rooftop-farming app helping city residents grow plants and vegetables with real-time care tips andplant management guidance.
- Won State-Level Codictive 3.0 Hackathon (2025) — recognized for innovation and technical excellence among all participatingteams.

Certifications

• Java Essentials — Cisco Networking Academy. • Java Core — Infosys. • Microsoft Azure — Microsoft. • C Programming — SimpliLearn.

Achievements

- State-Level Codictive 3.0 Hackathon Winner (2025) — Urban Blooms; recognized for innovation and technical excellence among all participating teams.
